

Manager Coaching for Sales Performance

Turning sales pressure into structured coaching conversations

2-hour facilitated workshop

Sales managers & team leads

Why this workshop matters

In a high-pressure financial sales environment, managers shape whether employees feel only pressured — or genuinely developed.

Current reality

Sales performance drives income; product-line teams may develop different habits and standards.

Management risk

Employees may attach to individual directors rather than the company growth system.

Course response

Give managers a common coaching language that improves behavior, not just pressure.

Core design question: How can managers turn sales pressure into a coaching conversation that improves specific sales behaviors?

What managers will be able to do

- 1 Distinguish pressure, feedback, and coaching
- 2 Diagnose common sales performance gaps
- 3 Use the S.C.O.R.E. coaching model
- 4 Ask questions that build ownership
- 5 Practice coaching in a realistic sales scenario
- 6 Create a two-week application plan

The session is built for immediate transfer: managers leave with a model, questions, role-play practice, and a real action plan.

Session map

Workshop rhythm: introduce → compare → diagnose → model → practice → apply.

Pressure, feedback, or coaching?

Pressure

“You need to close more clients this week.”

Creates urgency, but may not show what to change.

Feedback

“You explained features but did not ask enough about needs.”

Gives information about observed behavior.

Coaching

“Where did the conversation get stuck?”

Builds diagnosis, ownership, and next action.

Pair prompt: Which response is most likely to change future sales behavior — and why?

Common sales performance gaps

Product knowledge

Cannot explain product clearly

Market context

Cannot connect product to European market movement

Client discovery

Pitches before understanding need

Communication

Unclear, vague, or too aggressive

Process execution

Weak follow-up or next step tracking

Confidence / mindset

Avoids risk or difficult objections

Diagnostic question: Is this a knowledge problem, skill problem, process problem, or confidence problem?

From vague performance issue to coaching focus

The S.C.O.R.E. Coaching Model

Designed for short, practical coaching conversations — not long theory sessions.

S + C: Slow down the diagnosis

S — Situation

Clarify the specific sales moment.
Sample: “What happened with this client?”

C — Challenge

Find the real obstacle, not just the visible symptom.
Sample: “Where did the conversation get stuck?”

Manager discipline: avoid jumping directly to advice before the situation and challenge are clear.

O + R + E: Convert insight into action

O — Options

Help the employee generate possible next actions.

R — Response

Agree on one specific action, owner, and timing.

E — Evaluate

Schedule a review point and capture the learning.

Coaching becomes credible when it leads to a real next step — and a real follow-up.

Demonstration scenario

Scenario

A sales employee has spoken to a client twice about a precious metals product. The client has not moved forward. The employee says: “I think the client is just not interested. Maybe I should stop following up.”

Manager response A

“You should explain the safe-haven logic more clearly. Follow up again tomorrow.”

Manager response B

“What concern did you hear? Did they reject the product — or are they unsure about timing, risk, or value?”

Discussion: Which response builds capability for the next client conversation?

Advice-giving vs coaching

Focus	Advice-giving	Coaching
Starting point	Manager knows the answer	Manager helps diagnose the issue
Employee role	Receives instruction	Thinks through the sales situation
Best use	Urgent correction	Capability-building
Risk	May create dependency	Takes slightly more discipline

Rule of thumb: use coaching first when the goal is to improve judgment and behavior.

Questions that build ownership

Prompt for managers: “What question would help the employee see the sales situation more clearly?”

Practice: rewrite directives into coaching questions

Directive	Coaching question
You need to follow up faster.	What follow-up timing would keep the client engaged?
Your explanation is not clear.	Which part of the product explanation seemed unclear to the client?
You are not asking enough questions.	What do you still need to learn about the client’s needs?
You should push harder.	What is the next appropriate step to move the conversation forward?

Individual → pair compare → group share.

Role play setup

Roles

Manager
Sales employee
Observer / peer feedback

Task

Use S.C.O.R.E. to guide a 6–8 minute coaching conversation.

Switch

Change roles and repeat with a new scenario.

Manager must: clarify the situation → diagnose the challenge → generate options → agree on action → set follow-up.

Role play scenario options

Scenario 1 Client Discovery Gap

Employee keeps presenting European index products, but clients stop responding after first conversation. Call notes show limited discovery.

Scenario 2 Risk Communication Gap

Employee avoids discussing risk because they fear the client will lose interest. Product explanation sounds too optimistic.

Scenario 3 Follow-Up Gap

Employee has many initial conversations but few conversions. Follow-up steps are vague and often delayed.

Use the scenario, not personal criticism. Coach the behavior, not the person.

Observer checklist

Asked about the specific sales situation

Avoided jumping directly to advice

Helped identify the real challenge

Asked at least two open coaching questions

Guided employee toward a concrete next action

Agreed on a follow-up point

Peer feedback prompt: “One thing that helped the employee think was...”

Two-week coaching action plan

One employee I will coach

Sales behavior to focus on

S.C.O.R.E. step I need to use intentionally

One coaching question I will ask

How I will follow up

Evidence of improvement

Commitment: complete one documented coaching conversation within two weeks.

Post-training reinforcement

- 1** **Within 2 weeks** Complete one S.C.O.R.E. coaching conversation
- 2** **After first use** Manager reflection: what worked, what was difficult
- 3** **3–4 weeks** Manager roundtable to share application stories
- 4** **4–6 weeks** Employee pulse check on coaching usefulness

Key takeaways

1. Diagnose before coaching

Do not solve the wrong problem. Look for the behavior behind the result.

2. Use questions before advice

Questions build ownership; advice comes after diagnosis.

3. End with action

Every coaching conversation should end with a next step and follow-up.

Coaching is not being soft on performance. Coaching is how managers help employees improve performance.

Next steps

1. Select one real employee coaching opportunity.
2. Use S.C.O.R.E. within two weeks.
3. Document the conversation and evidence of improvement.
4. Bring one learning point to the manager roundtable.

Thank you
